Tech Skills

- HTML5
- CSS
- JavaScript
- React.JS

Soft Skills

- time-management
- active learning
- creativity
- attention to details
- Stress resistance (Im from Ukraine)

Frontend-Developer

Maxim Culoshnikov

My goals and achievements:

Goal: find a job as a front-end development. Preferably remotely, or in the office on the right bank of Kyiv.

I have experience with adaptive and responsive HTML/CSS layout. I know JavaScript and constantly improve my knowledge. For development, I would prefer to work with the React library. You can see my code and pet projects at the link to my [Github](#)

My projects:

1. [Moviebes](#) [React.js, styled.components]

I worked on this project with my friends, we had a progressive but not fully finalized design and a free api with a movie library. We have not finished this project yet and we are working on further work gradually adding something new.

2. [Huddle](#) [React.js, styled.components]

A simple responsive landing page made with React and styled components

3. [BookShop](#) [React.js, Material.UI]

In this little project, I got acquainted with Material UI as an opportunity to build a project without an existing design in a fairly short time.

4. [Gocorona](#) [HTML5, CSS3 + adaptive]

The rich features of HTML5 and CSS3 have been applied here. A working version of the burger menu was also created using :target without JS

5. [Relvice](#) [HTML5, CSS3 + adaptive]

This is my third project. Here I got the maximum benefit in understanding how to work with adaptive layout.

My Education:

Open international university of Ukraine

Faculty of Law and Social Relations

September 2007 - May 2012 |
